Please join us for the 11th CSDMS Annual Meeting in Boulder, Colorado, May 19th - 21st, 2019. This year's meeting entitled "CSDMS 2020 - Linking Ecosphere and Geosphere", is co-organized by the International Society for Ecological Modeling, the International Soil Modeling Consortium, the CSDMS Ecosystem Dynamics and the Critical Zone Focus Research Groups.

The aim of the meeting is to explore connections between ecosystems and earth-surface processes such as erosion, sedimentation, soil dynamics, and landscape/seascape evolution. Topics that will be addressed at the meeting include (but are not necessarily limited to):

- Life on the surface: biosphere-hydrosphere-lithosphere interactions
- Feedbacks between solid earth, fluid earth and biosphere
- Changing paradigms and challenges in linking ecosystem and earth surface research
- Dynamics of the Critical Zone
• Crossing climate thresholds

Meeting will include hands-on clinics and demos of transformative software products and approaches, plenary keynote presentations, lively poster sessions and breakout sessions with the goal of delineating current challenges and identifying new community initiatives to advance transdisciplinary earth-surface process modeling.

Up to 15 student scholarships will be granted through a competitive process for travel support to attend the CSDMS 2020 Annual Meeting. Deadline for application submission February 14th, 2020. Scholarship awardees will be notified by February 28th, 2020.

Please register soon to take advantage of early registration rates and limited hotel support!
